## Features & Benefits

### Built-In Calendar

The built-in calendar option allows administrators to set a reporting schedule at the beginning of the year and the Report (+) software does the rest, sending out specifically-appointed reports to all current recipients at the time dictated by the schedule.

### Archive eCabinet

There's no longer any need to take up space on your hard drive to store old reports. Report (+) automatically does that for you. Our industry-leading software provides a virtual "cabinet" that will store any report created while providing easy access to parents, guardians, teachers, and administrators.

### Multi-Language

Effective communication between the teacher and the student's guardian can have a huge impact on overall student progress. Report (+) gives teachers the ability to communicate reports and updates to guardians, even if their primary language is not English. Our multi-language function allows any document created with the software to be translated into the student's "home language" as identified in PowerSchool.

### Online Access & Convenience

Report (+) can automatically post any created report directly to EVI's Portfolio (+) student document management tool. This allows guardians hands-on access to view or save any documents.

### Go Green

Report (+) can provide an electronic alternative in many areas that once required printing on physical paper. From generating online reports to creating custom emails, Report (+) saves time and money while reducing environmental impact.

### Customization

When you use Report (+) to send reports you can control the messaging. Our tech team will work with you to customize all documents to reflect your school's unique tone and voice. If there is any additional information you'd like to add to a specific report, the software allows a free-text option where general text can be inserted.

### Print-to-Mail

For districts that require traditional printing for their reports, Report (+) offers the direct printing of documents as well as an option to outsource print and mail services to Educational Vistas.

### Security and Integrity

Educational Vistas takes the responsibility for the security and integrity of school district information to be the most important part of our support and service. Our software conforms to all industry standards nationally, at the state level, and locally at the district level. Upon request, we are happy to further discuss this area in detail.

### Your Partner

EVI has 30+ years of experience and proven success in providing preeminent products and services to hundreds of school districts. From curriculum to assessment, building forms to surveys, even staff observations and evaluations, get all the industry-leading tools you need to be more productive, efficient and effective. And as part of our proud affiliation with PowerSchool, we can deliver even greater performance and integration across all your SMS operations.
